

Berlin Lake Dam and Reservoir Master Plan Update Fact Sheet

Master Plan Revision

The US Army Corps of Engineers, Pittsburgh District, is revising the Berlin Lake Dam and Reservoir Master Plan which guides the management of government owned and leased lands around the Reservoir. This will influence future use of natural resources and recreational activities to ensure the sustainability of the Reservoir.

This is your opportunity to let the Corps know how you would like the Reservoir to be managed in the future. The planning process will include an analysis of potential effects of any proposed changes to the Master Plan on the natural and social environment, including fish and wildlife, cultural and historic resources, recreational opportunities, economics, land use, and public health and safety.

Why Update

The original Master Plan was developed over 35 years ago and does not reflect current conditions at the Reservoir. Changes in Corps regulations and community needs necessitate a revision to this Master Plan.

The Master Plan revision will classify the government lands around the Reservoir based on environmental and socioeconomic considerations, public input and an evaluation of past, present, and forecasted recreation trends. This update seeks to balance recreational development and use with the goal of conservation of natural and cultural resources.

Objectives of Update

- Conserve the resources of the Reservoir within the current policies and guidelines of the Corps
- Accommodate current and projected recreational use patterns with maximum efficiency
- Identify and protect cultural and natural resources
- Attract maximum participation by the public

About the Reservoir

Authorized by the flood control act of 1938, Berlin Dam and Reservoir is part of a coordinated system of reservoirs designed for flood protection and low-flow augmentation, and water quality on the Mahoning, Beaver, and Upper Ohio Rivers.

In addition to flood control and low-flow augmentation for water quality, the Reservoir and surrounding lands provide numerous opportunities for recreation and fish and wildlife preservation and enhancement. Most of the lands surrounding Berlin Dam and Reservoir are managed by the Ohio Department of Natural Resources.

Authorized purposes of Berlin Lake:

- ✓ Recreation
- ✓ Water Quality
- ✓ Flood Control
- ✓ Water Supply
- ✓ Low Flow Augmentation
- ✓ Fish and Wildlife

Master Plan 101

The Corps is responsible for the maintenance, restoration, and stewardship of natural resources on the multipurpose reservoir projects it manages. To facilitate the management and use of these lands, a Master Plan is maintained for each reservoir.

A Master Plan is a strategic land use management document that guides the comprehensive management and development of recreation, natural and cultural resources at Corps reservoirs and provides a vision for how the Reservoir should look in the future.

The Pittsburgh District is revising the Berlin Dam and Reservoir Master Plan which was last updated in 1984.
