SECTION III: SUMMARY OF FINDINGS

Complete ORM "Aquatic Resource Upload Sheet" or Export and Print the Aquatic Resource Water Droplet Screen from ORM for All Waters and Features, Regardless of Jurisdictional Status – Required

A. RIVERS AND HARBORS ACT (RHA) SECTION 10 DETERMINATION OF JURISDICTION:

"navigable waters of the U.S." within RHA jurisdiction (as defined by 33 CFR part 329) in the review area.

• **Complete Table 1 - Required**

NOTE: If the navigable water is not subject to the ebb and flow of the tide or included on the District's list of Section 10 navigable waters list, DO NOT USE THIS FORM TO MAKE THE DETERMINATION. The District must continue to follow the procedure outlined in 33 CFR part 329.14 to make a Section 10 RHA navigability determination.

B. CLEAN WATER ACT (CWA) SECTION 404 DETERMINATION OF JURISDICTION: "waters of the U.S." within CWA jurisdiction (as defined by 33 CFR part 328.3) in the review area. Check all that apply.

(a)(1): All waters which are currently used, were used in the past, or may be susceptible to use in interstate or foreign commerce, including all waters which are subject to the ebb and flow of the tide. (Traditional Navigable Waters (TNWs))

• **Complete Table 1 - Required**

This AJD includes a case-specific (a)(1) TNW (Section 404 navigable-in-fact) determination on a water that has not previously been designated as such. Documentation required for this case-specific (a)(1) TNW determination is attached.

(a)(2): All interstate waters, including interstate wetlands.

• **Complete Table 2 - Required**

(a)(3): The territorial seas.

• **Complete Table 3 - Required**

(a)(4): All impoundments of waters otherwise identified as waters of the U.S. under 33 CFR part 328.3.

• **Complete Table 4 - Required**

(a)(5): All tributaries, as defined in 33 CFR part 328.3, of waters identified in paragraphs (a)(1)-(a)(3) of 33 CFR part 328.3.

• **Complete Table 5 - Required**

(a)(6): All waters adjacent to a water identified in paragraphs (a)(1)-(a)(5) of 33 CFR part 328.3, including wetlands, ponds, lakes, oxbows, impoundments, and similar waters.

• **Complete Table 6 - Required**

Bordering/Contiguous.

Neighboring:

(c)(2)(ii): All waters located within the 100-year floodplain of a water identified in paragraphs (a)(1)-(a)(5) of 33 CFR part 328.3 and not more than 1,500 feet of the OHWM of such water.

(c)(2)(iii): All waters located within 1,500 feet of the high tide line of a water identified in paragraphs (a)(1) or (a)(3) of 33 CFR part 328.3, and all waters within 1,500 feet of the OHWM of the Great Lakes.

(a)(7): All waters identified in 33 CFR 328.3(a)(7)(i)-(v) where they are determined, on a case-specific basis, to have a significant nexus to a water identified in paragraphs (a)(1)-(a)(3) of 33 CFR part 328.3.

• **Complete Table 7 for the significant nexus determination. Attach a map delineating the SPOE watershed boundary with (a)(7) waters identified in the similarly situated analysis. - Required**

SPOE Name	(a)(8) Waters Name	(a)(1)-(a)(3) Water Name to which this Water has a Significant Nexus	Significant Nexus Determination Identify SPOE watershed; explain how 100-yr floodplain and/or the distance threshold was determined; discuss whether waters were determined to be similarly situated to subject water and aggregated for SND; discuss data, provide analysis, and then summarize how the waters have more than speculative or insubstantial effect the on the physical, chemical, or biological integrity of the (a)(1)-(a)(3) water, etc.
Indian Run	Wetland A – LRP-1999-01145	Mahoning River	Wetland A is a 1.58 acre PEM/PSS, located wetland within 1,675 LF of an UNT to Indian Run, which is outside of the review area, and is an (a)(5) water because it is a tributary to the Mahoning River (an (a)(1) water). Wetland A is similarly situated to Wetland B, as both waters have similar functions, are located sufficiently close to each other, and are also located sufficiently close to a WOTUS. This wetland provides habitat for various macro and microorganisms as well as the essential lifecycle support functions for the organisms that thrive within it. This wetland would also serve to store floodwaters and help recharge ground water preventing flooding. Likewise, the wetland would help eliminate pollutants before entering the water table and thus polluting other tributaries and (a)(1) waters. Therefore wetland A has more than a speculative or insubstantial effect on the chemical, biological, or physical integrity of the (a)(1) water and is jurisdictional.
Indian Run	Wetland B – LRP-1999-01145	Mahoning River	Wetland B is a 1.19 acre PEM/PSS wetland, located within 1,525 LF of an UNT to Indian Run, which is outside of the review area, and is which is an (a)(5) water because it is a tributary to the Mahoning River (an (a)(1) water). Wetland B is similarly situated to Wetland A, as both waters have similar functions, are located sufficiently close to each other, and are also located sufficiently close to a WOTUS. This wetland provides habitat for various macro and microorganisms as well as the essential lifecycle support functions for the organisms that thrive within it. This wetland would also serve to store

			floodwaters and help recharge ground water preventing flooding. Likewise, the wetland would help eliminate pollutants before entering the water table and thus polluting other tributaries and (a)(1) waters. Therefore Wetland B has more than a speculative or insubstantial effect on the chemical, biological, or physical integrity of the (a)(1) water and is jurisdictional.

Identify SPOE watershed; explain how 100-yr floodplain and/or the distance threshold was determined; discuss whether waters were determined to be similarly situated to the subject water; discuss data, provide analysis, and summarize how the waters did not have more than a speculative or insubstantial effect on the physical, chemical, or biological integrity of the (a)(1)-(a)(3) water.
