- **Complete Table 1 - Required**

NOTE: If the navigable water is not subject to the ebb and flow of the tide or included on the District’s list of Section 10 navigable waters list, DO NOT USE THIS FORM TO MAKE THE DETERMINATION. The District must continue to follow the procedure outlined in 33 CFR part 329.14 to make a Section 10 RHA navigability determination.

**D. ADDITIONAL COMMENTS TO SUPPORT AJD:** The project site was previously disturbed by mining activities in the 1950s and then again in the 1970s. The site is recovering back to natural conditions. The average elevation is 1000-1150 ft ASL. The Ohio River is 644 ASL and 7.7 aerial miles to the east of the site. The entire site is outside of FEMA mapped floodplains and not in close proximity to the Ohio River floodplain. A majority of the site is coal refuse and disturbed fill from historic uses. The three wetlands present on the site are not jurisdictional by rule and require

<sup>1</sup> In many cases these excluded features will not be specifically identified on the AJD form, unless specifically requested. Corps Districts may, in case-by-case instances, choose to identify some or all of these features within the review area.

SND. Based on the Corps site visit and review of the supplied information it was found that: The wetlands do not have the capacity to carry pollutants or flood waters to the TNW. The wetlands do not provide habitat and lifecycle support functions for fish and other species that are present with the TNW. The wetlands do not have the capacity to transfer nutrients and organic carbon that supports downstream foodwebs. The wetlands do not have a relationship to the physical, chemical, and/or biological integrity of the TNW. Wetlands do not significantly effect the TNW.

When considering volume, duration, and frequency of flow, as well as habitat, sediment reduction, export of organic matter, and export of food resources; Wetlands W-180927-1020, W-180927-1325, W-180927-1440 do not have more than a speculative effect on the chemical, physical, or biological integrity of the Ohio River (TNW).
